BOIL ADVISORY

Date: June 21, 2022

To: Putnam Community Water Customers

Subject: Water Boil Advisory, as recommended by the Ohio Environmental Protection Agency.

Water service was interrupted today due to a water main valve replacement.

From: JAY HUCK **MANAGER**
PCW Representative Title

Locations Affected: 201 to 305 Lawton Road, 102 to 113 Rae Ave. 102 to 109 Lindsey Ave. 104 Wilding Road

The water customers in the above defined areas and/or adjacent areas that possibly could have experienced a loss of water service are advised to rapid boil their drinking water for 1 to 2 minutes following restoration of water service.

X until 5:00 p.m. Wednesday June 22nd, 2022

This recommendation is issued whenever a water break emergency or repairs has resulted in a lost of water service. Water distribution repair workers have or are in the process of completing repairs. All affected water service locations have or will be flushed to re-establish our customers with a safe water supply. This means that effective chlorine residual is present to provide protection against bacteriological contamination in the water supply. Bacteriological tests will be performed according to EPA requirements. After the required samples are found to be total coli form negative, the boil advisory is cancelled. **If samples are positive for total coli form, the public will be re-notified and the boil advisory extended.**

This advisory is made to provide the public an opportunity to choose to provide maximum protection with the respect to the consumption of water for drinking purposes.

All customers should flush their own service lines and water usage taps until the water is clear. Brown or white water are normal discoloration's experienced after water service interruption. **Customers should consider the dangers of handling boiling water and protect others at risk from the potential hazards.**
